

Homework 5 - Interactive Visualizations

Due Date

April 26th, 2026 by 11:59 pm (with your final project)

Assignment

(15 points) Using your final project data, create 3 **different** interactive visualizations using the tools learned in week 11 class/lab (e.g. a map, histogram, boxplots). Include the visualizations on your website hosted on **GitHub Pages**. Each visualization should have a caption and a brief summary describing what it shows. These will be graded for visual style, caption, and description.

You may include your interactive visualizations within your final report OR on a separate page on your website. When submitting on Quercus, please:

- Provide the link to where the plots can be found on your website.
- Indicate which figures are interactive (e.g., “Figures 1, 2, 3 of my final report are interactive”).
